

Peace Bread conference 2021

Grm Novo mesto – center biotehnike in turizma

Experience in education during covid-19

- Agricultural education is part of two systems: education and agriculture
- Education system in Slovenia was under a big stress, we were working from home, students from their computers and mobile phones – a totally different learning environment
- Different times, different pupils and different teachers
- Pandemics also brings solutions and increased activity on certain areas (digitalisation, transition to organic farming)
- Active participation in the dialogue among rural and urban areas and people

Challenges in education during covid-19

- Covid - xx
- Immanent challenges: climate change, digitalisation, automatisisation, aging population
- Comming challenges: artificial intellegence

Change ...

- Everything changes all the time
- Increasing role of women in rural environment
- Is digitalisation in direct relation to democracy?
- Less hierarchy, more efficiency
- The future is integrated (parents, environment)

Next year ...

Welcome to Novo mesto!
